

## Representative Projects

### Project Name

**Teton County Landfill Closure**

### Client

**Teton County**

### Contact

**Heather Overholser  
(307) 733-7678**

### Key Elements

Land Survey  
Construction Administration  
Waste Characterization  
Soil Sampling  
Soil Remediation  
Conformance Testing Result Review  
Construction Quality Assurance

## Solid Waste Services

ECS, through its sister company, Solid Waste Professionals of Wyoming (SWPW), is a member of the project team responsible for the Teton County Landfill Closure Project. SWPW teamed with Golder Associates to provide all inclusive permitting, engineering design, and construction management services. The project consists of up to 40 acres of closure at the existing site. Waste will be excavated at the west end of the site to provide material for grading the closure area as well as providing additional space for the expansion of the Transfer Station, Composting, and Recycling Facility. ECS has provided land surveying services and construction cost estimating. Future services include construction oversight, soil sampling, and assisting with soil remediation. SWPW will also provide construction administration, and Construction Quality Assurance services.
